Radio Play by Radiomyme (tvOS)

Step 1 : Setup Project

Extend the « RadioPlay.zip » to your desktop
Make sure that Xcode is installed on your mac
Open « RadioPlay.xcodeproj », Xcode will start to open the files

Step 2 : Add your Station Streams

Go in Server tvOS -> js -> Presenter.js
Look for something like this

```
// You can declare any station here

var LiveFlux = {
    Radiomyme: [{
        title: "Radiomyme",
        artworkImageURL: "${this.BASEURL}/resources/images/radio/Radiomyme.jpg",
        url: "http://listen.radionomy.com/radiomyme-tv"
    }],

    ClubOne: [{
        title: "Club One",
        artworkImageURL: "${this.BASEURL}/resources/images/radio/Club1.jpg",
        url: "http://listen.radionomy.com/clubone"
    }],

    OldOne: [{
        title: "OldOne",
        artworkImageURL: "${this.BASEURL}/resources/images/radio/OldOne.jpg",
        url: "http://listen.radionomy.com/oldone"
    }],

    Parazhit: [{            <--- ID
        title: "Parazhit",
        artworkImageURL: "${this.BASEURL}/resources/images/radio/parazhit.png",
        url: "http://bit.ly/1OBiXFE"
    }],

    NRJ: [{
        title: "NRJ",
        artworkImageURL: "${this.BASEURL}/resources/images/radio/NRJ.jpg",
        url: "http://cdn.nrjaudio.fm/audio1/fr/40101/aac_576.mp3"
    }],

    DanceWave: [{
        title: "Dance Wave",
        artworkImageURL: "${this.BASEURL}/resources/images/radio/DanceWave.jpg",
        url: "http://dancewave.online/dance.mp3.pls"
    }],

    Hotmix: [{
        title: "HotMix Radio Dance",
        artworkImageURL: "${this.BASEURL}/resources/images/radio/hotmix.jpg",
```

TVML is a lot different from iOS, so
- the "title" is the name of the station displayed in the player
- the "artworkImageURL is the logo of the station displayed in the player view
- the "url" is the stream
- "Radiomyme" or "ClubOne" are the ID for the station. It's to let know the application that we are going to play that specific station

You can add as many station as you like!

Step 3 : Personalized your App

- You can find in Server tvOS -> templates many different type of presentations. In each one a picture as been added for you to see the result. We will give you just a brief introduction, so you will be able to change them.

1. The link to an other templates file. When the listener will click on it, he will be redirected to the single page view (here Radiomyme)
2. The link for the image (here a Slide)
3. The ID of the station created in the Presenter.js
4. The url of the image of the station (can be different of the player image)
5. The name of the station

Step 4 : Upload the files

Please upload the files to a dedicated server (dropbox or googledrive are not working). Make sure that the links are the same.

If you have any troubles, contact us at <u>radiomyme@live.fr</u> (24/7)
